

ActiSaf^{Sc 47}

FOR BEEF CATTLE

ACTISAF SC 47 PROMOTES FEED CONVERSION EFFICIENCY AND INCREASES GROWTH RATES BY UP TO 9%. AN ACTISAF BEEF ANIMAL GIVES YOU BETTER RETURNS.

Actisaf Sc 47 is the market leader in protected live yeast.

The unique manufacturing process used to produce the granules ensures that the live yeast core is protected from heat and moisture by a layer of dead yeast cells.

Only Actisaf Sc 47 has this stability, which means that more yeast cells reach the rumen alive, making Actisaf Sc 47 the most cost effective live yeast available.

How does it work?

Actisaf Sc 47:

- Stabilises rumen pH by reducing the build up of lactic acid, which causes acidosis
- Increases VFA (energy) production and microbial protein synthesis which both contribute to muscle development
- Reduces rumen oxygen content and stimulates the growth of rumen organisms that digest fibre and starch which contribute to more efficient digestion

What are the benefits of using Actisaf Sc 47?

- Increased growth rates – up to 9% in EU registration trials
- Improved feed conversion efficiency -

more weight produced per kg of feed

- EU registration trials show better carcass classification from beef animals fed Actisaf Sc 47
- Reduced incidences of acidosis, lameness and cud balls
- More content animals
- Average net return from using Actisaf in beef animals is £50 (€56) per head

Overall, Actisaf Sc 47 creates a more efficient rumen, which promotes better feed utilisation, ultimately leading to more productive and contented animals.

How do I use Actisaf Sc 47?

Actisaf Sc 47 is heat stable and can be included in both compound or home mixed diets.
