FOR HEALTHY PROFITABLE SOWS

“ON AVERAGE SOWS FED ACTISAF SC 47 WEAN AN EXTRA 0.7 PIGLETS PER LITTER AND DELIVER LITTER WEANING WEIGHTS 13% HIGHER. AN ACTISAF SC 47 SOW IS A MORE PROFITABLE SOW.”

Actisaf Sc 47 is the market leader in protected live yeast.

The unique manufacturing process used to produce the granules ensures that the live yeast core is protected from heat and moisture by a layer of dead yeast cells.

Only Actisaf Sc 47 has this stability, which means that more yeast cells reach the intestine alive, making Actisaf Sc 47 the most cost effective live yeast available and the only one authorised for all stages of pig production.

How does it work?

Actisaf Sc 47:

- Regulates the intestinal flora of the sow. This is especially important during lactation when feed intake does not meet the energy requirements of the sow and body reserves are mobilised

- Increases fibre degradation in the large intestine which produces more VFAs to meet the animal's energy requirements
- Improves the nutritional and immunological quality of the milk
- Decreases the incidence of scour and mortality in the piglets by stabilising their gut flora
- Improved feed intakes
- Less weight loss during lactation
- Better body condition at weaning while maintaining quality milk production
- Improved growth performance in the piglets – trials have shown that where sows have been fed Actisaf Sc 47, litter weaning weights increase by an average of 13% and weaner live weight increases by an average 5%

What are the benefits of using Actisaf Sc 47?

- More piglets weaned per litter when the sow has been fed Actisaf Sc 47 – EU registration trials have shown this to be an average of 0.7 piglets per litter
- Improved colostrum and milk quality and better piglet immunity resulting in decreased piglet mortality and scour

Overall the inclusion of Actisaf Sc 47 in the sow's diet improves intestinal function which results in improved body condition, milk quality and reproductive performance, with more piglets weaned per litter and better piglet growth.
